

Abstract of the Disclosure

[0058] The invention relates to absorbent product, such as a diaper, a pant diaper, an incontinence pad, a sanitary towel or the like. The absorbent product has an absorption body with a generally oblong shape with two longitudinal sides, two transverse sides, a longitudinal center line, and also includes a first, liquid-permeable surface layer and a second, essentially liquid-impermeable surface layer, an essentially liquid-impermeable backing layer, an absorption body positioned between said liquid-permeable surface layer and said backing layer, two leakage barriers made of flexible material in the longitudinal direction on each side of the longitudinal center line and the first, liquid-permeable surface layer. Each leakage barrier has a first edge permanently fastened along the first, liquid-permeable surface layer and a second edge which extends in the direction of the longitudinal center line of the absorbent product. Each leakage barrier also has a first surface and a second surface. The first surface and/or the second surface of each said leakage barrier is fastened to or near to the first, liquid-permeable surface layer and/or the second, liquid-impermeable surface layer.
